

## WirelessIDEA Available for Online Purchase

San Francisco, CA / Vancouver, BC – October 3, 2011

iaSolution Inc., formerly part of Aplix Corporation and now part of Aplix parent GAIA Holdings, announced today that WirelessIDEA, iaSolution's M2M solution for module manufacturers and M2M application developers, is now available for purchase on the Sierra Wireless website at <http://www.sierrawireless.com/wirelessidea>.

The library, initially released in February, was previously available for download and evaluation, with licensing done traditionally. Now developers have the ability to simply and conveniently purchase licenses online and deploy apps written in the Java programming language to devices in the field. Sierra Wireless' Open AT-enabled products are the only wireless modules with this capability, offering the developer community a powerful, cost-effective way to strengthen their app deployment efforts in areas like smart grid, telematics, or logistics.

"Working with Sierra Wireless to deliver this capability and seeing the subsequent response from the developer community has been gratifying," said iaSolution R&D Director, Alex Song. "As M2M devices become more sophisticated, capable, and more widely used to create the Internet of Things, we see WirelessIDEA as a key enabler of new and exciting applications. With this step, we know that using WirelessIDEA to further extend how applications are developed, deployed, and maintained in the M2M space will become even easier."
